Gap Assessment →

Develop a Mitigation Strategy →

Create Detailed Project Plan →

Validate Compliance!

The Payment Card Industry (PCI) Data Security Standard (DSS) was developed to encourage and enhance cardholder data security, and facilitate the broad adoption of consistent data security measures globally.

For the majority of Merchants, meeting and maintaining the requirements outlined in the PCI DSS can be a daunting and time consuming task.

VantagePoint Security™ has developed an approach that is designed to assist Merchants through the process as quickly and efficiently as possible – minimizing the impact to your staff.

Our **Gap Assessment** is an objective, business-focused activity that is carefully designed to identify the “gaps” between your existing security infrastructure – and a PCI-compliant environment. Results are provided in a detailed **Mitigation Strategy** that outlines the scope of your PCI compliance effort, and our recommended approach.

With the scope and strategy defined, a **Detailed Project Plan** is created for mitigating the gaps between your existing security infrastructure and PCI compliance. The plan will be developed to include as much - or as little involvement from your staff as you require.

With a **Detailed Project Plan** in place, the effort to complete the PCI DSS Self Assessment Questionnaire and **Validate Compliance** is easy!
