

eLearning Courses

Security awareness training is the single most important component of your Awareness Program. One of the most cost-effective training solutions is our web-based eLearning courses.

Built on industry-recognized security standards such as ISO 17799, our eLearning courses are designed to fit your busy, interrupt-driven job challenges.

Users can easily suspend their training session at any time - and resume when it's convenient. With your business and customer needs in mind, this approach offers your employees the convenience of focused training when it best fits their schedule – and the demands of their job.

An easy to use administrator's dashboard provides management of your eLearning training program and participants – to help keep your training program on track. With the flexible, built-in reporting tool you can easily monitor the progress of participants, and send email reminders as needed.

At the conclusion of your training program, a summary report is provided that identifies areas of strength demonstrated by employees company-wide, as well as areas where your security awareness program should focus additional attention.

Effective security awareness programs strengthen an organization's overall security position by focusing on its business and security objectives.

Training for your people...

Our web-based eLearning training courses provide an easy, cost effective way to deliver training to your people, and keep them informed and aware!

Courses...

Introduction to Information Security

A great starting point for any security Awareness Program is an **Introduction to Information Security** course.

safeguarding the integrity of business information™

VantagePoint Security: eLearning Courses

Introduction to Information Security provides your organization's employees with the critical knowledge they need in order to protect data, networks, and your confidential information from unintentional or deliberate security breaches. The course, designed for a non-technical audience, addresses the security vulnerabilities that occur in the course of everyday business computing—weak passwords, identity theft, fraudulent email, viruses, and network-based attacks.

Upon satisfactory completion of the course, learners will:

- Understand the importance of information security to your organization.
- Create secure passwords and keep them secure.
- Act knowledgeably in protecting your data and networks from unauthorized access.
- Perform their business operations with attention to the risks and vulnerabilities that are inherent in on-line computing.

Time to complete: 50-60 minutes

Intended audience: Non-technical computer users

Pre-requisites: None

Course content:

- Why Security Matters.
- Creating Secure Passwords.
- Using Passwords Effectively.
- Protecting Your Computer.
- Security Is about People.
- Taking Work Home.

Optionally, the **Introduction to Information Security** can be preceded by a **Challenge Test** designed to measure an individual's understanding of the concepts presented in the course. Employees that can demonstrate an acceptable level of understanding of the course concepts will have the option of waiving their requirement to take the course — freeing up those employees from additional training — saving your company time and money.

Secure Mobile Computing

safeguarding the integrity of business information™

VantagePoint Security: eLearning Courses

For those employees with company supplied mobile computing devices, such as laptops, PDAs and mobile phones, our **Secure Mobile Computing** course is an excellent follow-up to the Introduction to Information Security course.

Secure Mobile Computing provides your people with the critical knowledge they need to protect data, networks, and your confidential information from unintentional or deliberate security breaches while they are away from the office. The course, which can be taken as standalone training - or in conjunction with a complete information security training program such as Introduction to Information Security, is designed for a non-technical audience. It addresses the security vulnerabilities that occur in the course of everyday business computing when working out of the office — lost or stolen laptops, compromised confidential information, and unsecured networks. This course will provide simple strategies that your people can use to protect your company's information assets while they are working out of the office.

Upon satisfactory completion of the course, learners will be able to do the following:

- Describe the vulnerabilities that are specific to business computing away from the office.
- Describe strategies and behaviors that will provide better security for equipment and information without compromising business productivity while working out of the office.
- Act knowledgeably in protecting your data and networks from unauthorized access.
- Perform business operations with attention to the risks and vulnerabilities that are inherent in on-line computing.

Time to complete: 20-25 minutes

Intended audience: Non-technical computer users

Pre-requisites: None (Introduction to Information Security recommended)

Course Content:

- Preventing laptop theft or loss.
- Protecting information in public places and on public networks.
- Using Virtual Private Networks (VPNs) effectively.
- Using passwords, encryption, and security tokens effectively.
- Use cell phones, Blackberries® and iPhones® safely.

Web-based Evaluation Testing

Developing a security awareness training program that fits the unique requirements of your organization requires an understanding of their existing level of knowledge – strengths and weaknesses. With our web-based Evaluation Test, we can quickly assess what your organization understands well – and areas that need focus.

Annual Testing

Your security awareness program is an ongoing function, and needs to be treated as a continuous cycle of planning, action, feedback and improvement. Annual security policy review sessions coupled with competency testing, is an effective method for measuring the results of your security awareness program, and planning for improvement.

Customization Options

eLearning courses can be customized to fit your company's culture and ways of doing business. We can incorporate your company's security policies and procedures, which could include your industry's regulatory requirements – as well as your unique technology requirements.

Courses can also be branded to align with your organization's unique identity.

Hosted or In-house...

Our eLearning courses are **SCORM**-compliant. You can take advantage of our convenience, easy-to-use **hosted** LMS services, or the courses can be administered through your **in-house** Learning Management System (**LMS**).

VantagePoint Security's eLearning portal supplies users with a friendly, easy to navigate interface for managing their courses and tracking their own progress. It also provides an administration dashboard for managing the progress of all users, and facilitates tracking and reporting capabilities.

Summary

VantagePoint Security Awareness Programs equip employees with the knowledge they need in order to protect your critical business functions and information.
